EMPLOYMENT AND PAYROLL REPORTS

Following are publications of the Labour Division based upon establishment data in the field of industrial employment, payrolls and hours:

- 72-001 - Advance Statement on Employment and Average Weekly Wages and Salaries - Monthly - Price \$1.00 per year
(Index numbers of employment and averages of weekly wage and salary statistics for Canada (major industry divisions) and the provinces (industrial composite figures)).
- 72-002 - Employment and Average Weekly and Salaries - Monthly - Price \$4.00 per year
(Industry and area index numbers of employment and payrolls and averages of weekly wage and salary statistics; comparisons with earlier periods; charts and explanatory material).
- 72-003 - Man-Hours and Hourly Earnings - Monthly - Price \$4.00 per year
(Industry and area averages of hours per week, hourly and weekly wages, with comparisons from a month and a year earlier, and certain historical comparisons; charts and explanatory material).
- 72-005 - Estimates of Labour Income - Monthly - Price \$2.00 per year
(Monthly estimates of wages, salaries and supplementary labour income, both unadjusted and seasonally adjusted, for specific industries and regions; with annual totals from 1954).
- 72-008 - Estimates of Employees by Province and Industry - Monthly - Price \$1.00 per year
(Estimates of total numbers of employees, with comparisons with a month and a year earlier).
- 72-201 - Review of Employment and Average Weekly Wages and Salaries - Annual - Price \$2.00
(Industry and area index numbers of employment and payrolls and average weekly wages and salaries, monthly and annually, over a lengthy period; charts and explanatory material).
- 72-202 - Review of Man-Hours and Hourly Earnings - Annual - Price \$2.00
(Industry and area averages of hours per week, hourly and weekly wages, monthly and annually, over a lengthy period; charts and explanatory material).
- 72-204 - Earnings and Hours of Work in Manufacturing - Annual - Final Report - Price 75 cents
(Separate figures of earnings and hours for men and women and for salaried employees and wage-earners in one week in October from 1946 with industrial and area detail; charts and explanatory material. Special data are obtained on a rotational basis in successive years).
- 72-502 - Labour Income, 1926-58 - Price 75 cents
(A complete record of annual estimates of labour income from 1926, along with monthly figures from 1947; contains explanations of sources, methods and concepts).
- 72-503 - Estimates of Employees by Province and Industry, 1961-64 - Price 50 cents
(Estimates of total numbers of employees, monthly and annually, for major industrial divisions, Canada and provinces; contains a review of concepts, sources and methods and indicators of sampling variability).
- 72-504 - Employment Indexes, Average Weekly Wages and Salaries, Average Weekly Hours and Average Hourly Earnings, Monthly and Annual Statistics -- Historical Series, January 1961 - May 1965 -- Volume I - Price \$4.50
(This volume gives statistics revised to the 1960 Standard Industrial Classification and a 1961 time base for index numbers).

SYMBOLS

- .. figures not available

EXPLANATORY NOTES

Notes on methods and scope of monthly surveys of Employment and Average Weekly Wages and Salaries	i
---	---

APPENDIX

A technical note on the conceptual changes introduced in 1966	v
---	---

INTRODUCTION

The monthly survey of employment, payrolls and manhours on which the DBS reports "Employment and Average Weekly Wages and Salaries" (Cat. No. 72-002) and "Man-Hours and Hourly Earnings" (Cat. No. 72-003) are based was substantially revised with the January 1966 survey. Data on the revised concepts were tabulated for each month from January 1957 to December 1965. Thus parallel series on the old and revised bases are available for 9 years. An historical volume (Cat. No. 72-504) released in May 1966, covered revised data by months from January 1961 to May 1965. This present publication completes the release of the revised data and contains monthly data, from January 1965 to December 1967, and annual averages from 1957 to 1967. Monthly data from January 1957 to December 1960 are available on request. As well, there is considerable unpublished industry and geographic detail which can be obtained on request provided that the necessary requirements of the Statistics Act are met.

Review of Employment and Average Weekly Wages and Salaries

1967

Employment

The industrial composite index of employment (1961 = 100) at 122.6 in 1967 was 1.6 p.c. higher than in 1966. This increase was smaller than the 5.6 p.c. rises recorded in 1965 and 1966, and resulted from increases in the service-producing sector, as employment in all goods-producing major industry divisions was lower in 1967 than in 1966. Over the ten years from 1957 to 1967, the composite index rose by 22.6 p.c. with the largest increases recorded in service, finance, insurance and real estate, and trade.

Goods-Producing Industries

Employment in manufacturing fell slightly between 1966 and 1967. The index at 123.1 was 0.3 p.c. lower than in 1966, the first year since 1961 in which a rise was not recorded. A slight increase in non-durable goods was more than offset by a decrease in durable goods. The largest decline occurred in wood products (4.3 p.c.). Smaller decreases were recorded in other industries, and while transportation equipment and electrical products showed increases of 1.7 and 1.5 p.c. respectively, these gains did not compare with the large increases recorded in those industries in 1964, 1965 and 1966. Among the non-durables group, a decrease of 3.1 p.c. occurred in clothing, and paper and chemicals showed much smaller increases in employment in 1967 than was the case in 1966. Since 1957 the non-durable goods index has risen by 12.9 p.c. while the durable goods index was 19.7 p.c. higher, resulting in a 15.9 p.c. increase in the manufacturing index between 1957 and 1967.

In construction, the index at 122.6 in 1967 was 4.9 p.c. lower than in 1966. Both the building and engineering components contributed to the decline, with the decrease in engineering relatively larger. The fall in employment in construction followed three consecutive years in which substantial increases were recorded. Compared to 1957, the construction index was slightly lower.

A 2.0 p.c. increase was recorded in mining, approximately the same rise as occurred in 1966 but below the 6.4 p.c. increase recorded in 1965. In forestry, a 3.7 p.c. fall in employment during 1967 followed three consecutive years in which increases were recorded.

Service-Producing Industries

Employment in all service-producing industries continued to expand in 1967. The largest increase occurred in service, which has averaged annual increases of approximately 10 p.c. since 1964. The 1.7 p.c. rise in the index for trade was lower than the 8.2 p.c. increase during 1966, and compares with the increases recorded during 1959 - 1963.

Regions

With the exception of the Atlantic Region, where there was a slight decline, all regions showed small increases over 1966 in the composite employment index. These ranged from 1.1 p.c. in Quebec to 2.9 p.c. in the Prairie Region. The increase in the Prairie Region was less than the rises recorded during each of the previous two years, and in Quebec, Ontario and British Columbia was lower than the rate shown in each of the previous five years. The decline in the Atlantic Region followed five consecutive years during which increases were recorded.

Average Weekly Wages and Salaries

Average weekly wages and salaries at the composite level at \$102.83 in 1967 exceeded \$100.00 for the first time. This represented an increase of 6.7 p.c. over the 1966 level. The 1967 figure was slightly more than 50 p.c. higher than the average of \$67.90 recorded in 1957.

Among the major industry divisions, increases over 1966 ranged from 6.4 p.c. in manufacturing and finance, insurance and real estate to 9.3 p.c. in transportation, communication and other utilities. With the exception of construction, where the increase was slightly less, and forestry, where the rates were the same, all major industry divisions showed larger relative increases in average weekly wages and salaries during 1967 than during 1966. Levels of earnings during 1967 ranged from a high of \$129.39 in mining to a low of \$75.39 in service.

Increases among the regions were very much alike and about the same as were recorded during 1966. Both the Atlantic Region and Ontario showed average weekly earnings which were 6.5 p.c. above the 1966 level. British Columbia and Quebec recorded rises of 6.6 and 6.7 p.c. respectively. The Prairie Region led with an increase of 7.4 p.c. The average rate of increase in the Prairie region over the previous ten years was 3.4 p.c. Levels of average weekly wages and salaries among the regions ranged from \$85.00 in the Atlantic Region to \$114.50 in British Columbia.

NOTES

Each month the Employment Section collects from its reporting units data on the number of paid employees and their payrolls, on the number of wage-earners for whom a record of hours is kept and their hours and earnings, and on the number of female employees. The wage-earner data are published in a monthly report "Man-Hours and Hourly Earnings", Catalogue No. 72-003. The data relate to a reference period, conceptually the last seven days of the month. In a monthly tabulation the data are grouped into industrial and geographic units.

The Reporting Unit

The reporting unit is usually the establishment, that is, the smallest industrial unit which is a separate operating entity capable of reporting all elements of basic industrial statistics including information on inputs and outputs needed to calculate "value added" or "gross mark-up" or "gross profit" as well as the related data on employment and payrolls. For purposes of urban area statistics, the Employment Section may request separate reports from parts of an establishment located in different urban centres.

Monthly reports are requested from establishments in the following industry divisions: forestry; mining, including milling; manufacturing; construction; transportation, communication and other utilities; trade; finance, insurance and real estate; and parts of service.

The survey covers larger firms only, that is, firms having 20 or more employees in any month of the year. Thus all the establishments of a multiple establishment firm are included if the firm had 20 or more employees in total in any month of the year even though any particular establishment may have only a few employees. This size criteria results in approximately the same coverage as did the "usually employing 15 or more" criteria that was formerly used.

Coverage

The limitation of surveys to larger firms results in a large and relatively even coverage of total employment in the surveyed industry divisions in most provinces and urban areas. The industrial representation, though large, is more uneven; the proportion of employees covered depends on the organization of particular industries into larger or smaller establishments.

The table at the end of the notes shows annual employment in the survey as a percentage of the estimated total employment, the latter being estimated by adding together data from the employment and payrolls survey and data from a sample survey of smaller firms. A report on the total employment estimates is published monthly by the Employment Section, "Estimates of Employees by Province and Industry", Catalogue No. 72-008.

Definitions

Reference Period

The figures refer to the last seven days in the specified months. In practice, few establishments keep payroll records covering precisely this period and establishments are therefore permitted to report for their last pay period or pay periods in each month.

When the reported pay period is longer than one week, the payroll data are reduced to one week's proportion of the totals. The numerators of the fractions used in calculating these weekly equivalents are 5, 6 or 7 depending on the number of working days per week in which the establishment operated in the pay period. The denominators of the fractions are the number of working days in the different pay periods. For employees paid at annual or monthly rates, whose earnings are not affected by the number of working days in the month, fixed proportions are used to reduce the earnings to a weekly basis, without regard to the length of the calendar month. When a holiday, layoff or industrial dispute occurs in an establishment that reports a pay period that is different from the last week of the month, an adjustment is made to the data if the holiday, layoff or dispute affects the two periods differently.

The use of the last pay period in the month reduces double counting of individuals who work for more than one establishment in a period of several weeks. The Quebec forestry industry is an exception in that the turnover of wood workers paid on a monthly basis is high. Consequently this group reports on a special questionnaire which has an additional question on the average number of employees in the last week of the month.

Employment

The survey covers all wage-earners and salaried employees of reporting establishments who are paid for rendering current services or are on paid absence during the reference period except for casual employees working less than the equivalent of one full day in the pay period. Regular part-time employees are included. The employee concept excludes proprietors, directors and firms members including those who are actively engaged in the operation of the firm, pensioners, home-workers and persons providing services to an establishment on the basis of a contract for services.

Employees not receiving pay for any time during the reference period are excluded. For example, workers on strike during the reported pay period, or laid off as a consequence of a strike, are not included in the data unless they work part of the week or draw pay from their employers (e.g., unless they take paid vacations during the dispute). The exclusion of persons affected by industrial dispute is one of the main sources of irregular fluctuation in the series.

Average Weekly Wages and Salaries

The wages and salaries are derived from payrolls which include gross payments before deductions are made for taxes, unemployment insurance, etc. Included are salaries, straight-time wages, over-time wages, cost-of-living allowances, commissions, payments to persons absent because of holidays, vacations, sickness, etc., and regularly paid incentive, production and shift bonuses.

The payroll concept does not include supplementary labour costs, operational costs or payments not related to the reference period. Thus the data do not include such items as employer's contributions to unemployment insurance, medical plans, workmen's compensation, other welfare plans, the value of room and board, compensation in kind, travelling expenses, retirement gratuities, or bonuses paid at irregular or infrequent intervals. The treatment of vacation stamps is an exception. Although payment of vacation stamps does not relate to the reference period, these payments are included in the payroll data and the employees are considered to be absent without pay during the period they are on vacation.

Organization of Data

The Tabulation

Data tabulated for publication each month show the numbers of women, the number of employees of both sexes and weekly payrolls for the current and preceding month. The statistics first published for each month are preliminary; re-tabulation of the data in the succeeding month permits incorporation of corrections, retroactive pay for one month and data received too late for inclusion in the first tabulation. Data tabulated but not published are available on request provided the secrecy requirements of the Statistics Act are met.

The data are classified by industrial and geographic units and various averages, aggregates and index numbers are calculated.

Industrial Classification

All reporting establishments are assigned to an industrial class on the basis of their principal activity. If an establishment is engaged in a number of different industrial activities, its principal activity is determined by the net value added by these activities, or, where this is not possible, by the gross revenue obtained from the different activities. When an establishment has very mixed activities, it is not necessarily shifted from industry to industry each time its principal activity changes.

A description of the various industries and groups of industries may be found in the "Standard Industrial Classification Manual," DBS Catalogue No. 12-501. The "SIC code" columns in the main tables refer to this manual. The tables contain a few groups not found in the S.I.C. These includes:

Industrial composite - The sum of the industries tabulated

Durable goods manufacturing - The sum of wood products, furniture and fixtures, primary metal industries, metal fabricating industries, machinery (except electrical), transportation equipment, electrical products, and non-metallic mineral products

Non-durable goods manufacturing - The sum of the remaining manufacturing industries

Building - The sum of general contractors and special trade contractors

Engineering - The sum of highways, bridges and streets and other construction

As well, the tables subdivide the synthetic textile industry into filament yarn and staple fibres, and spun yarn and fabrics.

Geographic Classification

Reporting establishments are assigned to a province and, where applicable, to an urban area. Newfoundland, Prince Edward Island, Nova Scotia and New Brunswick are added together in some tables to give a figure for the Atlantic Region. Similarly Manitoba, Saskatchewan and Alberta are added together to give a figure for the Prairie Region. Establishments in the Yukon and Northwest Territories are excluded from provincial totals but are included in the Canada totals. For urban areas the Census of Population's "Metropolitan Area" definitions were used for the seventeen urban areas where they apply. The definitions used for other urban areas were based on a labour market concept; they usually include a main centre and surrounding territory. A list outlining the territory included in each of the tabulated urban areas is available from the Employment Section on request.

An establishment not located in a tabulated urban area or an establishment that has no fixed location such as certain transportation and construction establishments, is included in the provincial totals but is not assigned to an urban centre.

Index Numbers

Index numbers are calculated by dividing the current month's employment by one-twelfth of the total base period employment. The current employment consists of all employment in establishments that meet our size criteria in the current period. Base year employment consists of the employment of establishments that had 20 or more persons in any month of 1961.

Seasonally-adjusted index numbers remove from the employment indexes these regularly recurring fluctuations known as "seasonal variations". The adjusted index numbers thus approximate the trend, cycle, and irregular components of the time series. A variant of the Census Method II is used to calculate the seasonally-adjusted index numbers.

Other Calculations

The average weekly wages and salaries figures are obtained by dividing weekly payrolls by the number of paid employees, including part-time employees and casuals working more than the equivalent of one day a week. Annual statistics are calculated from the aggregate of the monthly data, not from monthly averages. The industrial composite figure for a given geographic unit is the aggregate of all data tabulated for that area.

APPENDIX

A TECHNICAL NOTE ON THE CONCEPTUAL CHANGES INTRODUCED IN 1966

This appendix outlines in detail the conceptual differences between the old and revised series. The extent to which the revised concepts have affected the actual data in the various series has been outlined in the introduction to the "Historical Series" (Cat. No. 72-504) mentioned above. The notes for this publication describe the concepts that are now in use.

The revision incorporated four main areas of conceptual change: a revised definition of the reporting unit, a revised system of industrial classification, a revised system of geographic classification, and a revised method of preparing index numbers.

Revised Definition of the Reporting Unit

This change is part of a larger revision throughout the DBS to assure that all data from establishment surveys are comparable. The basic unit now used by the Employment Section is the establishment as defined in the introduction to the Standard Industrial Classification Manual (Cat. No. 12-501).

Briefly, an establishment is now defined as the smallest unit which is a separate operating entity capable of reporting all elements of basic industrial statistics. An establishment is typically a factory, mine, store or similar unit. In most cases it is a separate firm. The items of data required of an establishment are: on the input side - materials used, process supplies used, fuel and power consumed, goods purchased for resale, earnings, and employment; and on the output side - commodities sold, shipped, or produced, or other appropriate measure of services rendered. Different inputs and outputs apply in different industrial sectors and the above are merely illustrations of the main elements. The important consideration is that the elements of input and output permit the calculation of "value added" or "gross markup" or "gross profit", as well as the related data on employment, man-hours and payrolls.

The Employment Section uses the standard definition of an establishment for its industrial classification. The entire activity of an establishment is classified to an industry according to the principal activity of the establishment. For this purpose, the activity of the establishment is determined, conceptually, by the net value added by its different industrial activities. This approach is followed in assigning an establishment to an industry division (e.g. manufacturing or trade), but frequently it cannot be used to assign the establishment to an individual industry within a division because the required records are not available. In this case, the principal activity is determined by the gross revenue obtained from the products produced or handled or services rendered. When an establishment has very mixed activities, it is not necessarily shifted from industry to industry each time principal activity changes.

When the activities of an establishment extend over a number of stages in the fabrication of a product, the establishment is classified by the final product, so long as the sales of intermediate products do not predominate. This rule does not apply to establishments which sell only goods of their own making; these are classified as manufacturers.

Head offices, regional offices and ancillary units (e.g. garages, warehouses, sales branches, etc.) that serve one establishment or a number of different establishments are assigned industrially along with the main establishment on the basis of the establishment's principal activity. Head offices or ancillary units serving establishments in different industries are classified at the level of the major groups of industries only and are not assigned to an individual industry. When the ancillary units, regional office or head office can supply a full range of principal statistics covering its own operation, it is, of course, treated as a separate establishment and assigned to the industry indicated by its principal activity.

In the past, the employment and earnings data for an industry related as closely as possible to all workers carrying on activities associated with, for example, the wholesale trade industry. Thus, manufacturing establishments were requested to send in separate reports for any sales outlets they operated and data from these reports were assigned to trade, not to manufacturing. Under the new definition sales branches are assigned to the industry indicated by the principal activity of the establishment of which they are a part, usually one of the manufacturing industries. Some 35,000 employees have been transferred from trade to manufacturing as a result of this change of concept. While the transfer of sales offices has been the largest result of this consolidation of previously separate reports into one establishment report, there are many other examples: some reports that were formerly in logging are now classified to sawmills, some restaurants located in stores that were formerly in service are now in trade, some erection staffs of metal fabricators that were formerly in construction are now in manufacturing.

While the Employment Section uses the establishment as a basis for assigning a report to an industrial class, it often uses an industrial unit smaller than the establishment in assigning a report to a geographic class. Where an establishment has a number of sub-units operating in different urban areas, separate reports are usually requested for each location and these reports are classified to the urban area where the employees are actually located. If the establishment, rather than a sub-establishment unit, had been used in the geographic classification, all the employment of the establishment would have to be assigned to the centre where the main office was located. Thus employment in such centres as Toronto or Montreal, where there are many head offices, would have been exaggerated while the employment in many smaller centres would have been understated.

In addition to changing the definition of the reporting unit, the Employment Section has clarified its definition of the minimum size of reporting units. In the past, firms (a firm is defined as an industrial unit which is based on a legal arrangement and may have a number of component establishments) were included in the survey if they usually employed 15 persons or more. This definition resulted in some ambiguity in the handling of seasonal firms which operated with few employees during the greater part of the year but had well over 15 employees at the peak of their operation. Under the new definition, a firm is included in the survey if it had 20 or more employees in any month of the year. New firms, and firms falling below 20 employees, are asked whether they expect to have 20 employees at any time during the year and are included or not included in the survey on the basis of their reply. The new definition has led to the exclusion of a few small firms that had between 15 and 20 employees and to the inclusion of some seasonal firms which met the "20-plus" criteria for a month or two of the year, but usually operated with fewer than 15 employees. This modification of the minimum size definition has had virtually no effect on the statistics.

In summary, three types of industrial units are distinguished for purposes of the employment, payroll and manhour statistics: the firm, the establishment, and the sub-establishment. The firm is a legal entity that can supply financial statistics as well as the principal statistics needed to calculate value added. The establishment is the smallest industrial unit that can supply principal statistics. The sub-establishment is a unit of an establishment which can report employment, payrolls and manhours data but cannot supply a full range of principal statistics. All three units are used in the employment survey. There is a minimum size cut-off that is based on the size of firm. A report is classified to an industry group on the basis of the principal activity of the establishment and to a geographic group on the basis of the location of the sub-establishment. In most cases, of course, establishments are separate firms with only one geographic location.

Revised Industrial Classification

The second aspect of the revision programme was the adoption of the 1960 Standard Industrial Classification. A complete description of the new classification can be found in the Standard Industrial Classification Manual (Catalogue No. 12-501).

In the S.I.C. manual, establishments are classified to an industry which is identified by a 3-digit number called the S.I.C. code. The S.I.C. codes are shown in all the main tables in Employment Section publications. In certain industries, the Employment Section makes a finer breakdown of the S.I.C. code (i.e. a 4-digit number). Three-digit industries are combined to form major groups and major groups are combined to form industry divisions. The Employment Section combines all the industry divisions that it surveys to form an "industrial composite" total.

The revisions of the industrial classification system were substantial. The following list of revised industry divisions and major groups indicates the main changes that were made.

Division 1 - Agriculture

Not included in the survey.

Division 2 - Forestry, chiefly logging

No change.

Division 3 - Fishing and Trapping

Not included in the survey.

Division 4 - Mining

Major Group 1 - Metals

No change.

Major Group 2 - Mineral Fuels

Absorption Plants connected with Natural Gas Processing, formerly in Manufacturing, are now included in this group.

Many of the services formerly in this group are now in Services Incidental to Mining.

Major Group 3 - Non-Metals, except Fuels

The Salt Processing Industry, formerly in Manufacturing, is now included in this group.

Quarries and Sand Pits, formerly in this group, now forms a separate group.

Major Group 4 - Quarries and Sand Pits

This is a new major group; formerly it was in the Non-Metals group.

Major Group 5 - Services incidental to Mining

This is a new major group which includes petroleum prospecting, other prospecting, contract drilling for petroleum, other contract drilling and other services incidental to mining. Many of these industries were formerly included in mineral fuels.

Division 5 - Manufacturing

Non-Durable Goods

Includes Major Groups 1, 2, 3, 4, 5, 6, 7, 10, 11, 18, 19 and 20.

Durable Goods

Includes Major Groups 8, 9, 12, 13, 14, 15, 16 and 17.

Major Group 1. Food and Beverages

This group now contains certain establishments engaged in Poultry Processing formerly in Agriculture and the Vegetable Oil Mills Industry formerly in Manufacturing.

The new Slaughtering and Meat Processing Industry corresponds to the old Meat Products Industry except that some Poultry Processors are now excluded.

The new Biscuits Industry was formerly called the Biscuits and Crackers Industry. The new Bakeries Industry was formerly called the Bread and Bakery Products Industry.

The new industries Distilleries and Breweries, respectively, were formerly published together under the title, "Distilled and Malt Liquors".

Major Group 2 - Tobacco Processing and Products

This group is now split into two industries: Leaf Tobacco Processing, and Leaf Tobacco Products.

Major Group 3 - Rubber Products

A new industry was created for manufacturers of Tires and Tubes.

Major Group 4 - Leather Products

Shoe Repair Shops, formerly included in this group, are now included in the Service Division.

The New Shoes, except Rubber Industry was formerly called Boots and Shoes, except Rubber.

Major Group 5 - Textiles

The new Woollen Yarn and Cloth Industry corresponds to the old Woollen Goods Industry except that a number of Fibre Preparing Mills, Pressed and Punched Felt Mills and establishments in Miscellaneous Textile Industries are now excluded.

The new Synthetic Textiles Industry was formerly called Synthetic Textiles and Silk. The industry consists of two sub-industries: Filament Yarn and Staple Fibres, and Spun Yarn and Fabrics; these are Employment Section categories and are not included in the S.I.C.

Major Group 6 - Knitting Mills

This is a new major group; formerly it was included in the clothing group.

Major Group 7 - Clothing

This group now excludes: Knit Goods, now a separate major group; Dress-making, now in the Service Division; and Fur Dressing and Dyeing, now in the Miscellaneous Manufacturing group.

Major Group 8 - Wood Products

The Furniture Industry, formerly in this group, now forms a separate major group.

Sawmills, Veneer and Plywood Mills, and Sash, Door and Planing Mills, respectively, were formerly combined as Saw and Planing Mills.

Major Group 9 - Furniture and Fixtures

This is a new major group. It consists of the Furniture Industries formerly in the Wood Products group and the Electric Lamp and Shade Industry, formerly in Miscellaneous Manufacturing, and in Non-ferrous Metal Products.

Major Group 10 - Paper and Allied Industries - No change.

Major Group 11 - Printing, Publishing and Allied Industries - No change.

Major Group 12 - Primary Metal Industries

Major Group 13 - Metal Fabricating Industries

Major Group 14 - Machinery (except electrical)

These three new groups were formed by re-grouping the industries of the Old Iron and Steel Products and Non-ferrous Metal Products groups. As a result of the re-grouping, some of the new industries are not comparable with the industries in the old classification. No distinction is now made between establishments making fabricated metal products of iron and steel and those making similar products of non-ferrous metals. Some other important changes are:

Manufacturers of Domestic Stoves and Ranges, formerly included in the old Heating and Cooking Appliances Industry, are now in the Electrical Products group.

Manufacturers of Washing Machines and Sewing Machines, formerly in the Machinery Industry, are now in the Electrical Products group.

The new Iron and Steel Mills Industry now includes some establishments in the Coke and Gas Industry which were formerly in the Petroleum and Coal Products group.

Blacksmithing, formerly in the Iron and Steel Products group, is now in the Service Division.

Jewellery and Silverware Manufactures, formerly in the Non-Ferrous Metals group, are now in the Miscellaneous Manufacturing group. Watch and Jewellery Repairs are now included in the Trade Division.

Major Group 15 - Transportation Equipment

The Auto Repair and Garages Industry, formerly in this group, is now in the Trade Division. Bicycles and Parts, formerly in this group, is now included in the Miscellaneous Manufacturing group and in the Trade Division.

The Motor Vehicles - Assembling Industry corresponds to the old Motor Vehicles Industry except that Truck Trailer Manufacturers are now excluded.

The Motor Vehicles - Parts and Accessories Industry corresponds to the old Motor Vehicle Parts and Accessories Industry except that Truck Body Manufacturers are now excluded.

Major Group 16 - Electrical Products

Radio, Television, and Electrical Appliance Repair Shops, formerly included with the industries in this group, are now in the Trade Division.

The Major Appliances, including Non-Electric Industry includes Manufacturers of Washing Machines, Sewing Machines, and Domestic Stoves and Ranges which were formerly in the Iron and Steel Products group.

Formerly, Household Radios and Televisions and Communications Equipment were published together as Telecommunications Equipment. The new Communications Equipment Industry now includes Manufacturers of Telephone Equipment.

The Electrical Industrial Equipment Industry corresponds to the old Heavy Electrical Machinery Industry except that establishments engaged in Armature Rewinding and Electric Motor Repair are now in the Service Division.

Major Group 17 - Non-Metallic Mineral Products

Ready-Mix Concrete Manufacturers are now included in this group; formerly they were in the Trade Division.

The Salt Processing Industry, formerly in this group, is now in the Mining Division.

Major Group 18 - Petroleum and Coal Products

Some Manufacturers of Coke and Gas Products, formerly in this group, are now in the Primary Metals Industries group.

Absorption Plants formerly in the Petroleum Refineries Industry are now in the Mining Division.

Major Group 19 - Chemicals and Chemical Products

Vegetable Oil Mills, formerly in this group, are now in the Food and Beverages group.

The Industrial Chemicals Industry corresponds to the old Acids, Alkalis and Salts Industry except that the new industry also includes Manufacturers of Synthetic Rubber, Compressed Gases, and certain Fertilizer Materials.

Major Group 20 - Miscellaneous Manufacturing Industries

Now included in this group are: Jewellery and Silverware, formerly in the Non-Ferrous Metals group; Bicycles, formerly in the Transportation Equipment group; and Fur Dressing and Dyeing, formerly in the Clothing group.

The Electric Lamp and Shade Industry, formerly in this group, is now included in the Furniture and Fixture group.

Division 6 - Construction

The Employment Section does not use the S.I.C. major groups in this Division. Instead, Building construction General Contractors (SIC 404) and Special Trade Contractors (SIC 421) are combined to form a "Building Industry". Contractors in Highway, Bridge and Street Construction (SIC 406) and in Other Construction (SIC 409) are combined to form an "Engineering Industry".

Highway, Bridge and Street Maintenance, formerly included in the Highway, Bridges and Streets Construction Industry, is now in the Transportation, Communication and Other Utilities Division.

Division 7 - Transportation, Communication and Other Utilities

Major Group 1 - Transportation

The Railway Transport Industry was formerly called Steam Railways. The Telegraph Industry, formerly included with the Railways is now in the Communications group. The Railway Industry consists of three sub-industries: Railway Transportation, Maintenance Equipment and Maintenance of Ways and Structures. These are Employment Section categories and are not part of the S.I.C.

The Bus Transport, Interurban and Rural, Industry and the Urban Transit Industry were formerly published together as Urban and Interurban Transportation.

Highway, Bridge and Street Maintenance is a new industry in this group. Formerly it was included in the Construction Division. This industry consists mainly of provincial government operations.

Major Group 2 - Storage

No change.

Major Group 3 - Communication

The Radio and Television Broadcasting Industry was formerly called Radio Broadcasting.

The Telegraph and Cable Industry includes Telegraphic Services formerly in the Transportation group.

The Post Office is a new industry in this group. Formerly it was in Government Services and not included in the survey.

Major Group 4 - Electric Power, Gas and Water

This group was formerly a separate industrial division called Public Utility Operation.

Division 8 - Trade

Major Group 1 - Wholesale Trade

Now included in this group are: Lumber, Building Materials and Supplies; Seeds and Fertilizers; and Farm Implements and Equipment. Formerly these were in Retail Trade.

The Ready-Mix Concrete Industry, formerly in this group, is now in Manufacturing.

Major Group 2 - Retail Trade

Lumber, Building Materials and Supplies; Seeds and Fertilizers; and Farm Implements and Equipment, formerly included in this group, are now in Wholesale Trade.

Watch and Jewellery Repair Shops, formerly in Manufacturing, are now included in this group.

Automotive Products now includes Motor Vehicle Repair Shops, formerly in Manufacturing.

Household Furniture and Appliance Stores now includes Radio, Television and Electrical Appliance Repair Shops, formerly in Manufacturing.

Division 9 - Finance, Insurance and Real Estate

Major Group 1 - Financial Institutions

Formerly this group was called Banking, Investment and Loans.

Major Group 2 - Insurance and Real Estate

This is a new major group. Formerly Insurance was published separately.

Division 10 - Service

Government Service, formerly an unsurveyed major group in this division, now forms a separate division.

Major Group 1 - Education

Not included in this survey, but will be covered by another Employment Section Survey of employment only.

Major Group 2 - Health and Welfare

Same as above.

Major Group 3 - Religious Organizations

Same as above.

Major Group 4 - Recreational Services

No changes.

Major Group 5 - Business Services

The scope of this major group has been narrowed to include only services to business management. Labour Organizations and Trade Associations, formerly included in this group, are now in Miscellaneous Services.

Major Group 6 - Personal Services

Shoe Repair Shops and Dressmaking, formerly in Manufacturing, are now included in this group.

Private Households, included in this group in the S.I.C. are not surveyed by the Employment Section.

Laundries, Cleaners and Pressers were formerly called Laundries and Dry Cleaning Plants.

The Hotels, Restaurants, and Taverns Industry corresponds to the old Hotels and Restaurants Industry, except that Lodging Houses and Residential Clubs are now excluded.

Major Group 7 - Miscellaneous Services

This is a new major group consisting of Labour Organizations and Trade Associations (formerly in Business Service); Photography (formerly in Personal Service); Blacksmithing and Welding (formerly in Manufacturing); Miscellaneous Repair Shops; Services to Buildings and Dwellings (formerly in Personal Services) and Other Miscellaneous Services.

Division 11 - Public Administration and Defence

Not included in the survey.

Revised Geographic Classification

The third aspect of the revision was the adoption of a new system of geographic classification. The main purpose of this revision was to clarify and standardize the urban area definitions used in the survey.

The Employment Section now tabulates data for 91 urban industrial areas of which 17 are metropolitan areas as defined by the Population Census. Each area is identified by the name of the principal city, or cities, but in practically all cases the area includes satellite communities. Wherever possible, this surrounding area was defined to include the whole of adjacent municipalities, parishes or townships so that a composite area is an aggregation of local government units listed in the Standard Geographical Classification. The general result of this revision was to enlarge the boundaries of urban areas and thereby to include more employment in these areas. An example is Toronto which now includes Oakville. The changes in the urban area statistics resulting from this revision were small. However, there were two major changes in the grouping of urban areas. Galt is no longer a separate urban area; it is now included in the Kitchener metropolitan area. Data from Welland and St. Catharines are now published separately; formerly Welland had been included in St. Catharines. A booklet giving the definitions of the new urban areas is available to users on request from the Employment Section.

Another revision of the geographic classification relates to the exclusion of data from the Yukon and Northwest Territories from the provincial totals. Segregated data for these territories is now tabulated. Formerly, the Northwest Territories with the exception of Baffin Island had been included in Alberta; Baffin Island had been included in Quebec; and the Yukon had been included in British Columbia. The resulting changes in the provincial statistics were small, because of the limited number of larger establishments in the northern territories.

Revised Series of Index Numbers

The final aspect of the revision relates to two changes that were made in the series of index numbers. The first change was the transfer from a 1949 base to a 1961 base. Index numbers compare data from the current period with data from a base period. If this comparison is to be clear and direct, the number of years separating the current period from the base period must not be too great. To assure that the series are meaningful, periodic reviews of the base period are therefore necessary. The year 1961 was chosen as the new base period because the economic conditions in that year were thought to be not abnormal and because the decennial census conducted that year provides data that are useful in analyzing employment index numbers.

A second change was a new method of constructing index numbers. Index numbers for any industry-area unit are prepared by dividing base period data into the data for a given month. The data for the given month are those that meet the 20 or more employees criteria described above. The base period data are the average of the monthly data in 1961 of all reporting units operating in the industry-area unit in 1961 that had 20 employees or more in any month in 1961. Base period data from an establishment not reaching 20 employees in 1961 is, of course, also included if the establishment is part of a multi-establishment firm having a total of 20 or more employees in 1961. In practice it is not the industry-area unit itself that is given a base figure, but rather a base assigned to each reporting unit so that cases where the reporting practice of an establishment changes or where an establishment changes from one industry to another or from one area to another may be dealt with. In all cases the base period for an industry-area unit reflects the situation as it was in 1961.

The revised method of constructing index numbers made it possible to have a fixed base so long as the industrial and geographic classification remains unchanged. The base will change only when the industrial or geographic code of a reporting unit is changed without any corresponding change in the activity or location of the reporting unit itself. An example would be an establishment with a number of branch offices whose payroll records in 1961 did not allow it to report separate data for employees located in various urban centres. If the establishment changed its bookkeeping procedure at a later date in such a way that it was possible to obtain these urban area segregations, the Employment Section would add the appropriate base period figures to the various urban areas at the same time as the new urban detail was added to the current tabulations.

Under the old system of calculating index numbers, base changes were much more frequent. In addition to the type of base change described above, when a previously untabulated firm grew to 15 or more employees, its current employment was added to the current tabulations, and its base period employment was also included, even if the normal employment in the base period was fewer than 15 persons. On the other hand, under the old method when the current employment of a firm fell below 15, it was removed from the current tabulation while its base period employment was usually still included.

The revised method of preparing index numbers, therefore, resulted in a more stable base. A relatively stable base will make future transfer to a new base period simpler and more accurate and facilitates conversions and other manipulations of index numbers by users.

Index numbers on the revised basis were re-tabulated back to January 1957. The following is a more detailed account of the procedures used in this operation. While the description refers to employment data only, the same procedures were followed for payroll data.

1. The most general case was that of a firm which had been operating in the same industry-area unit since 1957. Employment data from the firm were included in the tabulations for each year in which the firm reported 20 or more employees in any month of the year. If the firm had 20 or more employees in any month of 1961, it was given a base equal to its aggregate employment reported in 1961 divided by 12; otherwise it was given a zero base. A marginal firm that had, for example, over twenty employees in 1957, 1958 and 1960 was also included in the tabulations for 1959, even if it did not reach 20 employees that year.

2. When a firm began or ended operations in 1961, it was given a base equal to its aggregate employment in 1961 divided by 12, regardless of the number of months of actual operation in 1961. When a firm operated throughout 1961, but the Employment Section did not receive reports for all the months in 1961, the firm was given a base equal to the aggregate employment reported in 1961 divided by the number of months for which reports were received. Of course, if the firm never reached 20 employees in the reported months, it was given a zero base. Special procedures had to be followed in the case of firms with seasonal employment when data for the whole year are not available; the employment reported for only part of the year might not be representative of the annual employment in these firms.

3. If the Employment Section did not have sufficient information on record to give a firm a base figure, it collected the necessary data from the establishment or from other sources within the Bureau. If the required data could not be obtained, the base was estimated on the assumption that the employment in the firm had followed the trend of the smallest industry-area unit in which the establishment was tabulated.

4. Establishments and sub-establishments were treated in the same way as single-establishment firms, except that the individual establishments did not need to have 20 employees in the year to be included in the tabulations. However, amalgamations (when several branches that formerly reported separately were combined on one report) and breakdowns (when several branches formerly on one report were reported separately) required special procedures. For example, if branches which were combined on one report in 1961 sent in separate reports in later years, the base for each branch was calculated by apportioning the 12 month average of the 1961 employment on the ratio of the employment at the time of the breakdown. The data from 1957 to the time of the breakdown continued to be tabulated as a single unit.

5. If an establishment had not remained in the same industry-area cell since 1957, its base was tabulated in the industry-area unit relevant to the base year and the data for the other years were tabulated in the industry-area unit relevant to those years. If an establishment changed its industry-area cell during 1961, its base year employment was divided between the two cells.

6. If there was a change in the count of employees in an establishment's report because of a change in concepts, or because of the addition of branches not previously covered, the base was adjusted in such a way as to keep the trend of the index numbers comparable. For example, if a new group of employees was included in an establishment's report during 1961, the employment in the months of 1961 prior to the change and after the change was averaged. The base used for the period back to the change was the average after the change and the base used for the period from 1957 to the date of change was the average prior to the change.

7. Occasionally an establishment failed to send in its monthly reports in 1961 promptly enough for inclusion in the tabulations at that time. The Employment Section estimated the employment figures for these late reporters, and these estimated figures were used in calculating the base unless there was a significant discrepancy between the estimated and the reported figures.
